## The HKIE Environmental Division Annual Seminar

### “Green Building and Construction Materials - Challenges for Innovation and Excellence”

22 March 2013 (Friday) 9:00am – 5:30pm

Theatre II, Hong Kong Convention & Exhibition Centre

1 Expo Drive, Wanchai, Hong Kong

## Theme

There are over 40,000 buildings in Hong Kong. Green building refers to a structure using processes or products that are both environmentally responsible and resource-efficient throughout a building's life-cycle: from design, construction, operation and maintenance, to demolition. While building techniques and construction materials have been changed in the past several decades to become more energy efficient, many innovations for making buildings green are also friendly to our planet as well.

This Annual Seminar aims to provide a platform for practising engineers, academics, managers and other professionals to share their valuable experiences and views on adopting doable approaches to deal with challenges for innovation and excellence. Through these approaches, everyone can increase the comfort, safety, and efficiency of our buildings without putting undue stress on our natural resources while minimizing pollution and protecting the environment.
