## INTRODUCTION

Meeting the growth in demand for energy in a sustainable manner and combating climate change are not easy. There are many factors for consideration such as energy prices, technologies availability, supply reliability and environmental concerns. To build a low carbon future and meet our aspirations for a quality life, collaborative effort and support must be taken to address all these challenges and devise practical solutions.

The Seminar aims to provide a platform for engineers, government officials, subject experts, academics and other professionals to share their valuable experience and practices, either locally or internationally. The Seminar will discuss the importance of energy challenges and the associated technologies and solutions to build a sustainable energy future.

The Seminar comprises three sessions, namely energy challenges, policies and technologies & solutions. Topics under consideration include Energy & Climate; Regional Energy Development; HK Energy Development and Challenges; Energy Security & Sustainability; Power Market Regulation / Deregulation; Technologies Innovation & Transformation; Environmental Technologies and Engineering Solutions.
